

# Clean Cars Last Longer

## Self Service Procedure

### Tire cleaner

**Tire Cleaner** is a low pressure solution designed to clean dirty white walls and white letter tires. To apply Tire Cleaner, select this service on the coin meter and wait for solution spraying from the wand to turn green, then spray tires completely. After applying tire cleaner to all tires select PRESOAK on the coin meter and proceed with that cycle on the total surface of the vehicle. This gives the tire cleaner time to loosen the film. After applying PRESOAK select the High Pressure Soap Cycle and hold the spray nozzle 1" one inch from the whitewall or white letters for maximum results. Clean the remaining tire holding the spray nozzle about 3" three inches from the surface.

### Pre-Soak

**Presoak** is a low pressure solution specially formulated to help dissolve and loosen road film and other pollutants that your vehicle may have encountered. To apply PRESOAK select this service on the coin meter and wait for the white bubbly solution to spray from the nozzle before applying to the vehicle. Apply to the entire vehicle starting at the bottom and working your way to the top. For stubborn areas you may want to make a second application to insure effective cleaning. After covering the entire vehicle select HIGH PRESSURE SOAP

### High Pressure Soap

**High Pressure Soap** is a high pressure service that uses special cleaners to remove the road film loosened by the PRESOAK cycle. To apply High Pressure Soap select this service on the coin meter and hold the spray nozzle 6" six inches from the body of the vehicle while squeezing the safety trigger. Wash the vehicle from the top to the bottom washing single sections at a time, such as one door or a fender. For cleaning stubborn areas you hold the spray nozzle 1" one inch from the surface. Areas that need additional help with cleaning, you may need to utilize the foaming brush that is available. If this is needed you should wash the foam brush head with the HIGH PRESSURE SOAP to help remove any debris that may have become lodged in the brush from previous users

### Foam Brush

The Foaming Brush cycle utilizes a special brush wand with soft hog's hair bristles to gently remove stubborn grime from your vehicle's surface. The foaming brush is much safer for the surface than a sponge or a rag because the foam flowing through the bristles helps to lift the loosened dirt above the painted surface and prevent scratching. A sponge or rag may hold the dirt and can scratch the surface like fine sandpaper. Prior to using the foam brush be sure to wash the entire vehicle with High Pressure Soap to remove any mud or large particles. Rinse the foam brush head then select this service and remove the Foaming Brush from its holder. When foam begins to flow start cleaning the vehicle with gentle circular motions. Use the Foaming Brush ONLY on glass or painted surfaces. DO NOT USE on Wheels, Tires, Fender Wells or Engines as this may gather dirt within the bristles and be abrasive to The painted surfaces.

### High Pressure Rinse

**High Pressure Rinse** is a high pressure service that continues the cleaning process by removing the film and debris that have been loosened by the previous wash cycles. It is important to thoroughly Rinse the vehicle after washing. Soap left on a vehicle is not any better for your vehicle than leaving dirt on it. To apply High Pressure Rinse, select this service on the meter and hold the spray nozzle 6" six inches from the body of the vehicle while squeezing the safety trigger. Rinse the vehicle from the top to the bottom and rinse moldings and trim thoroughly

### Foamy Conditioner

**Triple Foam Conditioner** is a low pressure cycle that utilizes a special wand to apply the multicolor foaming conditioner to the vehicle. The foaming conditioner is specially formulated to enhance the shine of your vehicle. To use the Triple Foam Conditioner, select this service on the coin meter and remove the Foaming Conditioner Wand from its special holder. When foam begins flowing from the wand, you should start applying the conditioner to the entire vehicle. After applying the conditioners to the entire vehicle, select High Pressure Rinse and thoroughly rinse the entire vehicle. You will see a beautiful shine on your vehicle's painted surfaces.

### Spot Free Rinse

**Spot Free Rinse** is the final step in providing the ultimate clean car and should ONLY be used after the vehicle has been rinsed with high pressure. Spot Free Rinse is purified water that removes the water used in the wash process that may cause spotting. By utilizing this special filtration system we are able to remove the chlorines, calcium, iron and other elements found in the local water supplies that create spots on cars after washing. By applying Spot Free Rinse to your vehicle after the wash process you will not need to towel dry your car. To apply Spot Free Rinse, select this service and hold the spray nozzle 6" six inches from the vehicle while squeezing the safety trigger. Spot Free Rinse the entire vehicle from the top to the bottom and rinse moldings and trim thoroughly. Your car will dry Spot Free.
